

DPO2U

Compliance, sealed.

Crypto-grade attestation. Score stays private. Proof is public.

1.94s per attestation **\$0.0002** flat cost **15 / 67** jurisdictions / countries

Researcher first. Builder always.

A decade between law and code. Compliance treated as a protocol problem, not a paperwork one — and the receipts to back it up. The Researcher that Ships Code.

Frederico Santana

ACADEMIC

LL.M.

Law, Technology & Innovation - FGV

POSTGRAD

Compliance & Data Protection · DPO certification

Research

Blockchain cooperation via smart contracts & evolutionary game theory PUC-Rio

CPDP LATAM 2026

Compliance as Protocol — *Cooperative Mechanisms, Zero-Knowledge Proofs and Smart Contracts in Data Governance for Digital Platforms*

BUILDER

DP02U

Founder · 66 MCP endpoints, 435 tests green, 14 Solana programs live

DPO at Smart NX

Led team of 30 developers

HACKATHONS

3rd place · Polkadot ZK

Compliance was born as a wax seal.

For a thousand years, an act became binding the moment hot wax met paper. Provable. Unforgeable. Callable by anyone who could see it. Then we digitized it — and lost the seal.

1100 — 2000	The Wax Seal	Sovereign authority pressed into matter. Break the seal, prove the tampering.
2000 — 2015	The PDF	<i>The document survived. The proof did not. Compliance became a story.</i>
2015 — 2024	The Dashboard	<i>Evidence collection automated. The toll-gate paradigm preserved.</i>
2024 →	<i>Sealed.</i>	Crypto-grade. Callable by anything. Enforceable anywhere.

Compliance became a toll-gate.

PDFs nobody reads. Spreadsheets nobody opens. And when proof is demanded — sensitive data shared with third parties.

\$50,000

the consultancy

delivers a document. The auditor verifies the document — not the system.

3 months

the lost closing

founder-developers blocked from enterprise revenue by an LGPD report that doesn't exist.

—

the exit

AI-native startups give up the European market entirely to escape GDPR overhead.

The score is exposed. The proof doesn't exist.

The score stays *private*.
The proof is *public*.

Your sensitive data never leaves your perimeter.

The proof of compliance — and only the proof — is sealed on-chain. Auditor, regulator, counterparty all verify the same fact, independently. None of them touch the data.

Four primitives. One atomic transaction.

alt_bn128 syscalls + sub-second finality + native program composition On any EVM/L2, this is four protocols with bridges. On Solana, it's one deploy.

THE FOUR PRIMITIVES

Shadow Drive

Immutable Payload

DPIA, evidence files. SHA-256 hashed, make-immutable after upload.

Light Protocol

State in scale

Audit trail compressed. CMT root + UTXO-style leaves indexed by Helius Photon.

Pinocchio

CU-efficient Runtime

Orchestrates 3 CPIs in a transaction. ~1.4M compute units.

Squads v4

Trustless authority

Sign Vault PDA . Revoke = propose + 2-of-3 + 24h timelock.

*It's Solana-native. **The composition is the protocol.***

One Solana program. Sealed in 1.94s.

An MCP that turns law into code. Submit → ZK-prove → Seal on-chain. Same primitive, fifteen jurisdictions.

SUBMIT

Application sends payload to a Solana program with a regulatory reference.

→ PROVE

ZK circuit (SP1 + OpenFHE) verifies the predicate. Data never touches chain.

→ SEAL

Attestation written on-chain with timestamp + reference. Status: sealed.

Status: **sealed**. Latency: **1.94s**. Cost: **\$0.0002**. Per attestation.

Fifteen jurisdictions. Sixty-seven countries.

Across privacy regimes and AI governance. Each one a typed MCP tool, a Zod-validated KB entry, and an on-chain attestation schema.

LGPD	Brazil · São Paulo (HQ)	2018
GDPR	European Union	2018
MiCAR	EU crypto	2024
DPDP	India	2023
PDPA	Singapore	2012
UAE	Abu Dhabi · Dubai	2023
PDPL	UAE federal	2021
POPIA	South Africa	2013

NDPA	Nigeria · Lagos	2023
CCPA	California · SF	2018
PIPEDA	Canada · Toronto	2000
LAW25	Quebec · Montréal	2023
PIPA	South Korea · Seoul	2026
PDP	Indonesia · Jakarta	2022
APPI	Japan · Tokyo	2003

Fifteen jurisdictions serving sixty-seven countries — *across privacy regimes and AI governance.*

Live. Tested. Sealed.

This is not roadmap. This is what runs in production at mcp.dpo2u.com today.

66	MCP endpoints	OpenAPI documented.
435	tests passing	All green.
14	Solana programs	Deployed devnet.
15 / 67	jurisdictions / countries	Privacy + AI governance.
1.94s	per attestation	Measured latency.
\$0.0002	per attestation	Flat cost on Solana.

Built on infrastructure. Not labor.

Three streams. Same primitive. The marginal cost of a new jurisdiction is one MCP module.

PRICING

STARTER	Single-jurisdiction fintech	\$24K /yr
GROWTH	Multi-chain issuer or chain	\$96K /yr
ENTERPRISE	MiCA-significant stablecoin issuer	\$360K /yr

+ \$0.0002 per attestation · + \$6K/yr per jurisdiction module

NUMBERS

\$180K	ARR per Growth account
---------------	------------------------

\$2.25M	LTV (Growth, 8% churn)
----------------	------------------------

<\$6K	Blended CAC
-----------------	-------------

1 mo	Payback (Growth)
-------------	------------------

82%	Gross margin
------------	--------------

8%	Annual churn
-----------	--------------

Capital for the *seal*.

SAFE round. \$3M post-money cap. Deployed against the two things infrastructure can't replace: third-party assurance and enterprise distribution.

THE ROUND

INSTRUMENT	Post-money SAFE · YC standard	SAFE
VALUATION CAP	Post-money	\$3M
STAGE	Pre-seed · live infra · 435 tests	Pre-seed

Open to lead + strategic angels with RegTech, ZK or LATAM enterprise distribution.

USE OF FUNDS

45%	Third-party Assurance <i>SOC 2 Type II · ISO 27001 · external ZK circuit audit ·</i>
35%	Go-to-Market <i>First two enterprise design partners · technical content engine · ecosystem deals.</i>
20%	Reserve & Operations <i>Working capital · regulatory filings.</i>

RUNWAY · 18–24 MONTHS · TO FIRST ENTERPRISE ARR

The question isn't whether regulation reaches on-chain.

It's who builds the protocol it runs on.

We are.

*We're DP**O**2U.*

The HTTPS of compliance — *for Web2 and Web3.*

Come seal with us.
